Company: Maqssfot

<https://naturals.pk/>

Tools: Asp .Net MVC, RestFul Web API, JQuery, Bootstrap, JavaScript

The portal is intended to be the PLACE to FIND and BUY local food from farmers and local food producers, in the Norway, and potentially all over the world. The portal have all the common functionalities that any webshop has, such as:

- customer profiles,
- shopping cart,
- automated order confirmation to customers,
- follow up on carts that wasn't checked out,
- payment solution,
- VAT-handling,
- integration with accounting system,
- admin functions including dashboards to show traffic, manage orders and so on.

The portal support 5 different groups of users.

1. Farmers and local food producers (called suppliers or farmers)
2. Private Customers
3. Corporate customers
4. Delivery providers
5. Freelancers
6. Localefood staff (called admins)

Some responsibilities of rols:

- Farmers register in portal and add their food in system for customer and then customer purchase food using system.
- Delivery providers provide food to customers after carrying from farmers.
- Freelancers add different kind of recipes in system and customer check recipes to cook food.
- Staf manage the all operations and behave like HR in organizations.

Educator

Jan 2016 - May 2017 (1.3 years)

Company: Educator / Final Project

Tools: Asp .NET , Visual Studio

Educator

This project is an online solution for searching different educational institutions for the students and for Institutes to manage their Activities. we authorize the administrators of educational institutes to register & upload activities of their institutes. In this Project, there will be a centralized database that can have record of all users or administrators of the institutes. Administrator of institute is able to insert, edit and delete their data of institute & the students will be able to check the activities by searching their specific institute. The viewers will also be able to find out which institute is best to study in their area according to their ranking. The institutes will be ranked automatically according to the searching algorithm.

Project Goals & Objectives

Some basic objectives of this project is:

1. System rank the top education organizations in any city and it provide the ideas of top organizations to the user.
2. System provide the account to the admin of any organization to upload their organization activities. Some Activities are:

- Result
- Date Sheet
- Test Schedule
- Attendance System
- Teacher Attendance
- Teacher Schedule
- Courses Information
- Time Tables
- Fee Information

System will deal with above all given activities and some more with them.
